Welcome to the public hearing for the I-4 Beyond the Ultimate Project Development and Environment (PD&E) study. This study focuses on the concept of adding express lanes on I-4, from west of US 27 to west of Kirkman Road/State Road (SR) 435 to the west, and from east of SR 434 to east of SR 472 to the east; a distance of approximately 40 miles. Tonight’s hearing focuses on presenting the recommended design alternative for adding express lanes on the segment of I-4 from East of SR 434 to East of US 17/92 in Seminole County.

This hearing is being conducted to give interested persons an opportunity to express their views concerning the location, conceptual design, and social, economic, and environmental effects of the proposed improvements.

Tonight begins as an open house at 5:30 p.m. with a formal presentation at 6:00 p.m., followed by a public comment period. Speaker cards are available for those who wish to provide a verbal comment. Persons wishing to submit written statements, in place of or in addition to oral statements, may do so at the hearing or by sending them to the project contacts on the back page. All statements postmarked no later than November 25, 2016 will become a part of the public hearing record.

All information presented at the public hearing is available on the study website, at www.i4express.com.

How can you get involved?
Public comments and questions are welcome at any time throughout the study. If you would like to learn more about the study, please contact one of the following individuals.

FDOT Project Manager
Beata Stys-Palasz, P.E.
Florida Department of Transportation
719 S. Woodland Boulevard, MS 502
Deland, Florida 32720
Phone: 386-943-5418
Email: beata.stys-palasz@dot.state.fl.us

Consultant Project Manager
Mr. Luis Diaz, P.E.
HNTB Corporation
610 Crescent Executive Court, Suite 400
Lake Mary, Florida 32746
Phone: 407-805-0355
Email: ldiaz@hntb.com

Public participation is solicited without regard to race, color, national origin, age, sex, religion, disability, or family status. Persons wishing to express their concerns relative to FDOT compliance with Title VI may do so by contacting Jennifer Smith, FDOT District 5 Title VI Coordinator, by email at jennifer.smith2@dot.state.fl.us, or by phone at 386-943-5367.

Local Agency Partners
In addition to receiving public input, we are coordinating with the following local agencies throughout the study.

Design Alternatives

Two design alternatives will be presented at the public hearing:

1. The Recommended ‘Build’ Alternative
2. The ‘No Build’ or Do-Nothing Alternative

“No Build” Alternative

The ‘No-Build’ or ‘Do-Nothing’ Alternative consists of making no improvements to Interstate 4 (or the interchanges and side streets). In a ‘No-Build’ scenario, no additional right-of-way for roadway improvements or pond sites would be required. The ‘No-Build’ Alternative remains a viable alternative throughout the entire PD&E study.

Recommended ‘Build’ Alternative

The recommended alternative includes six general use lanes and four express lanes along I-4. The Build Alternative also includes improvements to interchanges and planned sidestreet reconfigurations. The recommended typical sections are shown below:

Disadvantages of the ‘No-Build’ Alternative include:
- Increased traffic congestion and travel delays
- Increased roadway maintenance and user costs
- Increased emergency response time
- Potential increase in crashes due to increased traffic congestion

Advantages of the ‘No-Build’ Alternative include:
- No inconvenience to the public during construction
- No right-of-way acquisition or relocations
- No costs for design, right-of-way, or construction

Noise Abatement

FDOT has conducted multiple noise studies along the study segment to determine locations where a noise barrier could help reduce sound between the interstate and adjacent neighborhoods. Noise barriers are solid obstructions built between the highway and homes along a highway. They do not completely block all noise. They only reduce overall noise levels. Noise barriers are not built to block views of traffic from homes.

Based upon the completed noise studies, one location is eligible for a noise barrier. It is along the east side of I-4, from the rest area to Emma Oaks Drive (adjacent to the Pine Bay Drive Subdivision). More analysis will be done during the design phase.

When is a Noise Study Needed?

A noise study is typically required when:
1. A new highway alignment is built.
2. The number of through traffic lanes is increased.

I-4 Beyond the Ultimate will add new express lanes and rebuild the existing general use lanes. The noise studies used the Federal Highway Administration’s (FHWA) traffic noise model to predict future traffic noise increases with the expansion of I-4. Areas predicted to experience future noise levels of 66 decibels (dB) or more have been evaluated for feasibility and cost reasonableness.

What Will a Noise Barrier Do?

The area adjacent to the noise barrier is referred to as the “noise reduction zone”. The goal of the barrier is to reduce noise by at least five decibels. The amount of noise reduction depends on:
- Distance of the property from the barrier
- Distance of the noise source from the barrier
- Length and height of a barrier
- Elevation differences among the road, barrier and residences

Advantages
- Can provide an audible reduction in highway traffic noise to areas directly behind the barrier
- Can be designed to be aesthetically pleasing from both the highway and property owner sides of the barrier

Disadvantages
- Can block the view of commercial or landmark signs
- Can adversely affect existing ornamental vegetation in proximity to the barrier
- Trees within FDOT Right-Of-Way may be removed in order to construct barriers
- Can create nighttime shadow areas
- Noise barriers can obstruct breezes and sunlight
- Noise barriers may attract graffiti
- Noise barriers may reduce, but not eliminate, traffic noise

Who Gets a Noise Barrier?

Both FHWA and FDOT require that a sound barrier reduce traffic noise by at least five decibels at two or more sites and by 7 dB at one site to be considered feasible. Another FDOT requirement is that the cost to build a sound barrier is $42,000 or less per site. Meeting this requirement makes it cost reasonable. If a sound barrier is determined to be both feasible and cost reasonable, the site owners that would benefit from the barrier are asked to provide input on the proposed barrier.
